

Bath Ventilation

Today's construction standards require a fan that can really move air. And today's home buyer expects it to be done quietly! Ventilation fans from **Fantech** and **Marley** fit these needs perfectly. Whether you need a remote-mounted, in-line fan or traditional ceiling-mount unit, we can help you select a fan that will keep a powder room or master bath a clean, fresh, moisture-free zone...and do it quietly!

Marley Ceiling Mount Fans

Kitchen Range Ventilation

Gone are the days of a filtered range hood that does nothing... and does nothing loudly. A hood vented to the outside is the only practical way to remove kitchen odors and maintain a healthy home. **Fantech** fans and range liners provide for the most powerful and quietest systems available. Whether your range is 30" or a 70" commercial-style unit we can provide a solution. If you are using your own custom hood, we can integrate one of our fans to work with most any hood system. Our powerful fans and silencers allow for the highest levels of kitchen ventilation with low perceived sound.

Our range liners allow for the concealment of the ventilation behind a façade that complements the theme of the cabinet design.

FLYNN & REYNOLDS AGENCY, INC.

We are a manufacturer's representative specializing in electrical and heating/ventilating products. Many of our products make a residential structure highly functional, attractive, healthier and more comfortable.

Flynn & Reynolds takes pride in being more than just a marketing organization—we're also a valued partner in the conceptualization, design and integration of the products we represent. We can be found working with architects, engineers, builders, and trades people from a project's start to its completion.

Representing only the finest manufacturers in their respective fields, we know that our next project is dependent on the trust and satisfaction developed on our last one. This brochure provides an overview of our capabilities. For further information on the products, design assistance and instructional seminars offered by Flynn & Reynolds please contact us directly.

Other products offered by Flynn & Reynolds include:

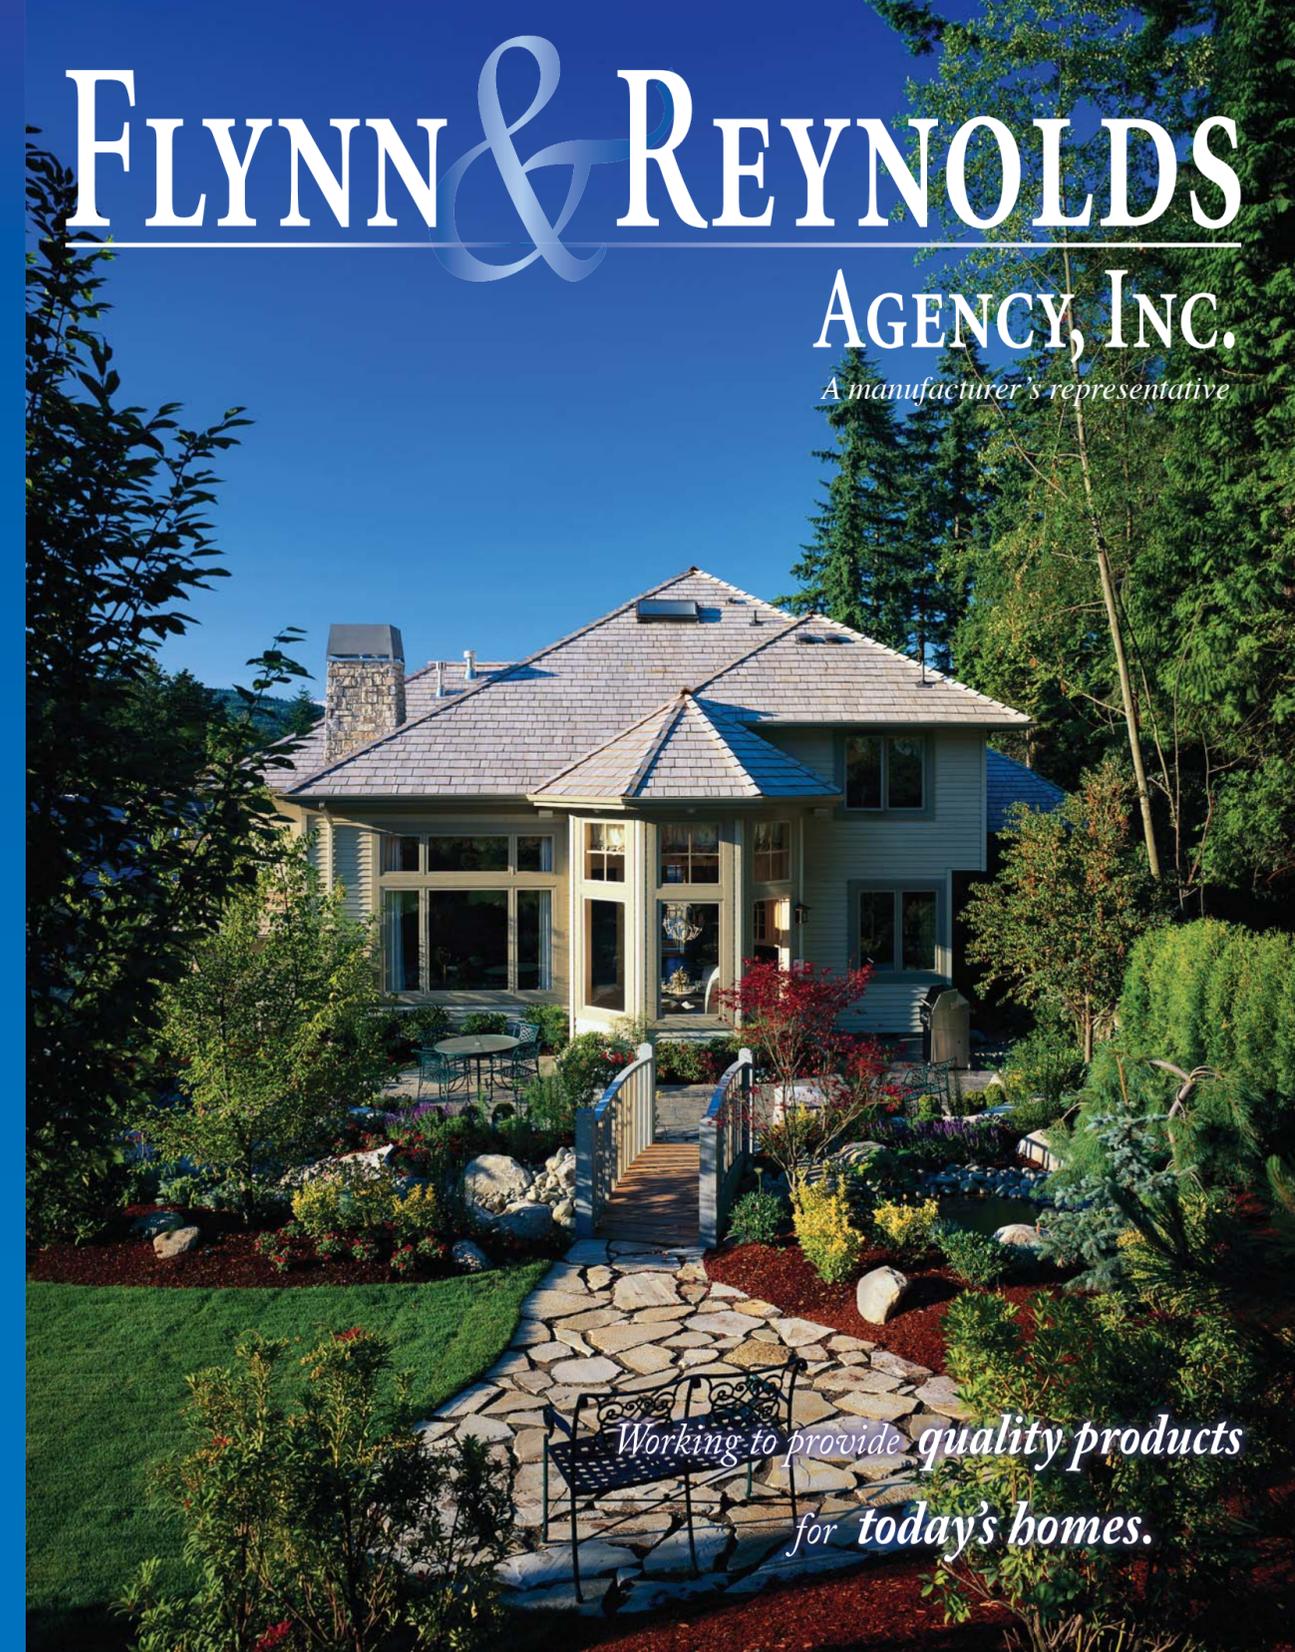

- Smoke and CO Alarms by
- Outlet Boxes by
- Electric Heat by
- Thermostats by

A manufacturer's representative

Working to provide quality products for today's homes.

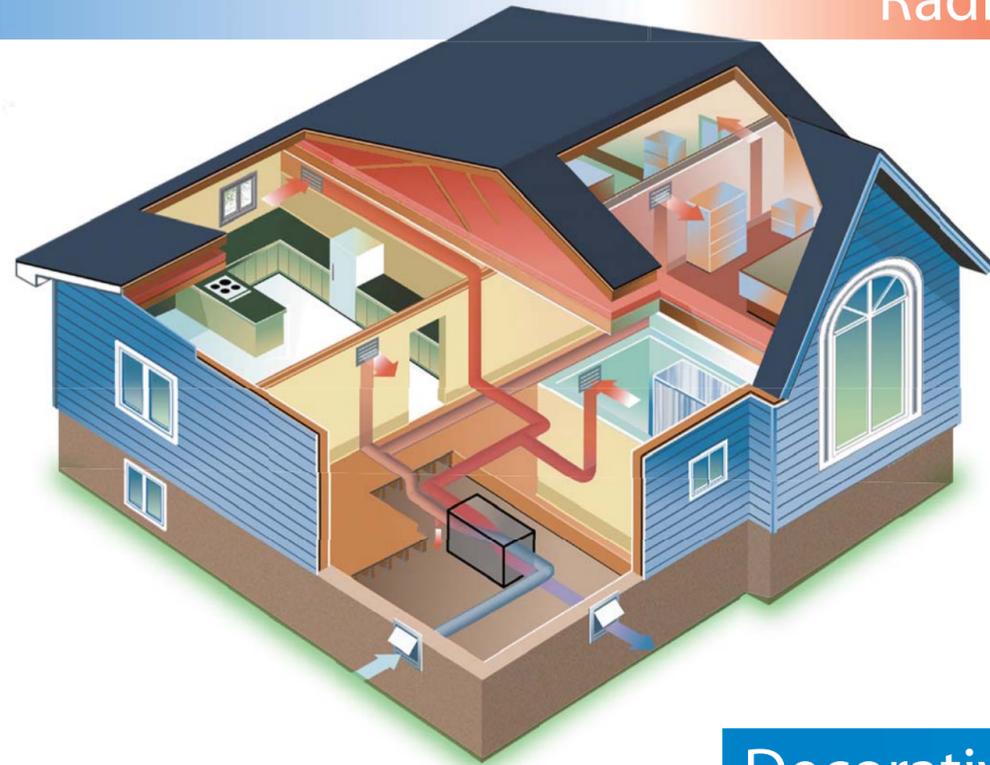

Indoor Air Quality

Fantech Heat Recovery Ventilator

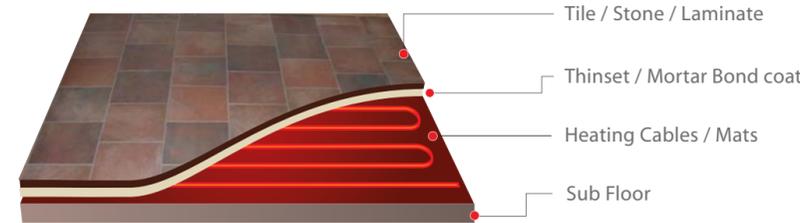

Insulation and construction methods used today create wonderful homes, but these structures don't breathe the way the houses we grew up in did. The air inside a modern home is often five times dirtier than the air outside the front door. In addition, uncontrolled humidity levels can also lead to mildew and mold issues. A Fantech Heat Recovery Ventilator brings control of a home to your fingertips. Bringing fresh air from outside while exhausting inside air, the HRV minimizes the energy impact by moving the heat from the exhaust air into the fresh outside air. The result is a home with clean, comfortable air.

Radiant Heat / Floor Warming

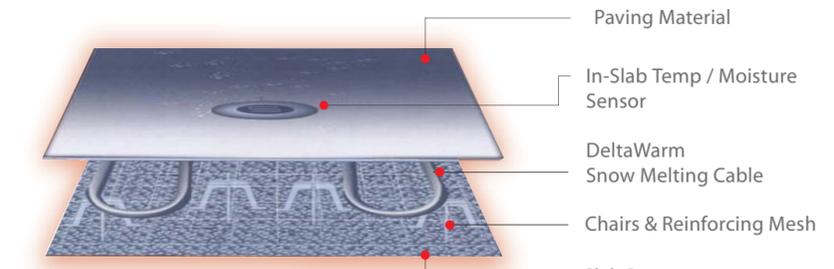

Everybody loves a warm floor. In fact, it is one of the most requested items by home buyers today. Bathrooms, kitchens and basements can be brought to a whole new level of comfort. Not only can floors be comfortably warm, but the entire room's temperature can be maintained by one of these installations. We represent manufacturers of both cables and mats. Whatever your project, we can recommend the appropriate product. We can even heat floors that have already been finished!

Installation Example

Snow Melting Systems

Sometimes a luxury, sometimes a necessity—always a welcome addition. Automatic snow melting systems incorporated into walkways, stairs, and driveways provide numerous advantages over shoveling, plowing and blowing. They eliminate physical labor and slip-and-fall incidents. Snow melt systems ensure that a home owner will always get up or down a steep drive, and they prevent undue wear on decorative surfaces from the damaging effects of plow and shovel blades.

Installation Example

A DeltaTherm Heated Driveway

Decorative Ceiling Fans

Finally, although central vacuum systems are often seen as a convenience item they can be an important part of a healthy home. A central vacuum removes all dirt to a remote location, often in a garage or mechanical room. Consequently they do not exhaust dirt and irritants back into the room like many portables can.

Whether you want a ceiling fan to be functional or a statement, we have a fan for you. The Hunter Fan Company is America's most recognized brand of fans and their quality is legendary. We can help you pick a fan that will help cool in the summer and conserve energy in the winter.

Roof De-Icing

Water damage from ice dams is a costly and frustrating experience. Whether it is new construction or an existing structure—we can help. We have been providing de-icing systems for over 30 years across New England. A Flynn & Reynolds sales representative can show you how to design and install a system that will eliminate this problem. Most importantly, our experience and use of innovative products allows for a system that can have little or no visual impact.

In addition, allergy and asthma sufferers may opt for an added or stand alone Fantech HEPA filtration unit. These unseen, quiet units filter the air within the home

using a true HEPA filter for the highest degree of protection. Affordable to install and maintain, these units provide vastly superior protection when compared to non-filtered plug-in units.
